Financial Data Warehouse

Version: 1.0

Prepared By: FP&A Analyst (Portfolio Project)

Last Updated: August 2026

Purpose

This document provides a business and technical reference for the Financial Data Warehouse used in the FP&A Quarterly Business Performance Review.

The data dictionary documents the purpose of each table, its primary fields, key relationships, and role within the analytical model. It is intended to support report development, dashboard maintenance, and analytical consistency across the organization.

Data Warehouse Overview

The Financial Data Warehouse follows a star schema design consisting of:

- 4 Fact Tables
- 9 Dimension Tables

The warehouse integrates financial, budgeting, accounts payable, and accounts receivable data into a centralized analytical model for executive reporting and financial analysis.

Source Systems

Source	Description
General Ledger	Financial transaction history
Budget Forecast	Budget and forecast planning data
Accounts Payable	Vendor invoices and payment activity
Accounts Receivable	Customer invoices and collections

Dimension Tables

dimAccount

Purpose: Stores the organization's chart of accounts used for General Ledger reporting.

Primary Key: DepartmentKey

Business Use: Allows financial transactions to be analyzed by account category.

Example Attributes

- Account Number
- Account Name

dimCostCenter

Purpose: Stores organizational cost centers used for expense allocation.

Primary Key: CostCenterKey

Business Use: Supports departmental and operational cost analysis.

Example Attributes

- Cost Center Name

dimCurrency

Purpose: Stores supported reporting currencies.

Primary Key: CurrencyKey

Business Use: Supports financial reporting across multiple currencies.

Example Attributes

- Currency Code

dimCustomer

Purpose: Stores customer master information for Accounts Receivable reporting.

Primary Key: CustomerKey

Business Use: Supports customer-level receivable and collection analysis.

Example Attributes

- Customer Name

dimDate

Purpose: Central calendar dimension used across all fact tables.

Primary Key: DateKey

Business Use: Provides consistent time intelligence for reporting.

Example Attributes

- Full Date
- Calendar Year

- Quarter
- Month
- Day Name

dimDepartment

Purpose: Stores organizational departments.

Primary Key: DepartmentKey

Business Use: Supports departmental financial performance reporting.

Example Attributes

- Department Name

dimStatus

Purpose: Stores payment and collection status values.

Primary Key: StatusKey

Business Use: Supports invoice lifecycle reporting.

Example Attributes

- Status Name

dimTerms

Purpose: Stores payment term definitions.

Primary Key: TermsKey

Business Use: Supports payable and receivable aging analysis.

Example Attributes

- Payment Terms

dimVendor

Purpose: Stores vendor master information.

Primary Key: VendorKey

Business Use: Supports vendor payment and outstanding liability analysis.

Example Attributes

- Vendor Name

Fact Tables

factGeneralLedger

Purpose: Stores detailed financial transactions imported from the General Ledger.

Primary Key: FactGLKey

Foreign Keys

- DateKey
- DepartmentKey
- AccountKey
- CostCenterKey
- CurrencyKey

Business Measures

- Debit
- Credit
- Net Amount

Business Use

- Financial statement reporting
- Departmental spending analysis
- Account analysis
- Monthly financial trends

factBudgetForecast

Purpose: Stores budget, forecast, and actual financial values.

Primary Key: FactBudgetForecastKey

Foreign Keys

- DateKey
- DepartmentKey

Business Measures

- Actual USD
- Budget USD
- Forecast USD
- Variance USD

Business Use

- Budget vs Actual
- Forecast analysis
- Variance reporting
- Executive financial planning

factAccountsPayable

Purpose: Stores vendor invoices and payment transactions.

Primary Key: FactAPKey

Foreign Keys

- VendorKey
- DateKey
- CurrencyKey
- StatusKey
- TermsKey

Business Measures

- Invoice Amount

Business Use

- Outstanding payables
- Vendor analysis
- Payment term analysis
- Cash flow monitoring

factAccountsReceivable

Purpose: Stores customer invoices and collection activity.

Primary Key: FactARKey

Foreign Keys

- CustomerKey
- DateKey
- CurrencyKey
- StatusKey
- TermsKey

Business Measures

- Invoice Amount

Business Use

- Outstanding receivables
- Aging analysis
- Customer collections
- Working capital reporting

Relationships

The Financial Data Warehouse follows a star schema architecture where dimension tables provide descriptive business context and fact tables store transactional financial data.

All relationships are configured as one-to-many, with dimension tables filtering fact tables through surrogate keys.

Reporting Model

- Quarterly Financial Performance Review
- Department Performance & Variance Analysis
- Working Capital & Cash Flow Outlook
- Financial Transaction Analysis
- Executive Outlook & Recommendations

Notes

- All surrogate keys are generated within the SQL Server data warehouse.
- Monetary values are reported using the source currency, with USD used for budget and forecast reporting where applicable.
- Historical data is maintained to support trend and variance analysis across reporting periods.
- This data warehouse was developed as part of a simulated FP&A business case for portfolio demonstration purposes.
