04	Working Capital Position	6
05	Financial Activity & Management Outlook	7
06	Management Priorities & Conclusion	8
APPENDIX		
A	Basis of Analysis & Methodology	9

EXECUTIVE SUMMARY

Results Ran Ahead of Plan Through FY2024–FY2025, Led by Marketing

FY2024–FY2025 · Actual vs. Budget & Forecast, USD

\$3.79M TOTAL ACTUAL	+1.5% BUDGET VARIANCE	+1.7% FORECAST VARIANCE	98.3% AVG. FORECAST ACCURACY
--	---	---	--

PERFORMANCE & DEPARTMENTS

\$3.79M	Total actual, FY2024–FY2025 — 1.5% ahead of budget, 1.7% ahead of forecast
+4.9%	Marketing — strongest favorable department variance
–1.4% / –1.8%	Finance / IT — largest unfavorable department variances
98.3%	Average forecast accuracy, ranging 96.6%–99.7% by quarter

WORKING CAPITAL & FINANCIAL ACTIVITY

92.7%	Of outstanding USD receivables past due — \$394K of \$425K (FY2024)
\$334K	Concentrated in invoices over 90 days past due
~(\$43K)	December GL aggregate net activity (2023–2025), the most pronounced single month

MANAGEMENT PRIORITIES

1. Prioritize collection of overdue receivables. 2. Improve forecasting and budget discipline for Finance and IT. 3. Maintain quarterly forecast reviews. 4. Review notable General Ledger activity, particularly December, before FY2026 planning.

DEPARTMENT PERFORMANCE & VARIANCE

Marketing Delivered the Strongest Favorable Variance; Finance and IT Ran Unfavorable

FY2024–FY2025 · Budget Variance by Department, USD

Department	Actual	Budget	Bud. Var.	Var. %
Marketing	\$852,890	\$812,793	\$40,097	+4.9%
Sales	\$736,537	\$712,384	\$24,154	+3.4%
HR	\$534,459	\$528,396	\$6,063	+1.1%
Operations	\$482,895	\$479,846	\$3,049	+0.6%
Finance	\$634,038	\$642,804	(\$8,766)	(1.4%)
IT	\$550,705	\$560,662	(\$9,957)	(1.8%)

ANALYST INTERPRETATION

Marketing was the only department to exceed budget by more than 4%, driven by favorable performance in most quarters. Finance and IT were the only two departments with unfavorable budget variances, though both remained within 2% of plan.

MANAGEMENT CONSIDERATION

Review Finance and IT forecasting assumptions and continue monitoring departmental spending discipline ahead of FY2026 planning.

WORKING CAPITAL POSITION

Overdue Receivables Represent the Primary Working-Capital Concern

FY2024 · USD-denominated Accounts Receivable, aging as of year-end due-date basis

\$425K

OUTSTANDING AR

\$394K

OVERDUE AR (92.7%)

\$247K

OUTSTANDING AP

\$179K

NET AR/AP

Top 5 Overdue Receivables (USD)

Customer	Due Date	Days Over	Amount
Initech	6/22/2024	192	\$7,987
Initech	9/3/2024	119	\$7,985
Soylent	3/2/2024	304	\$7,944
Soylent	7/25/2023	525	\$7,899
Globex	6/7/2024	207	\$7,699

ANALYST INTERPRETATION

Nearly all outstanding USD receivables (92.7%) are past due, and the vast majority of that balance — \$334K of \$394K — is over 90 days overdue. This concentration in the oldest aging bucket is the clearest working-capital signal in the dataset.
AR figures independently reconciled (USD, FY2024 due-date basis). AP and Net AR/AP are dashboard-sourced — see Appendix A.

MANAGEMENT CONSIDERATION

Prioritize collection efforts on the oldest overdue balances before FY2026 planning to reduce working-capital exposure.

Forecast Accuracy Stayed Above 96% Each Quarter; December Ledger Activity Stands Out

Quarterly Forecast Accuracy — FY2024–FY2025, USD

Average of quarterly accuracy figures ($1 - |\text{Actual} - \text{Forecast}| \div \text{Forecast}$, aggregated across departments). Full-period average: 98.3%.

ANALYST INTERPRETATION

Forecast accuracy remained above 96% in each of the four quarters shown, suggesting forecasting practices have tracked actual results reasonably well over this period. Separately, General Ledger activity (2023–2025, aggregated by calendar month) shows month-to-month net swings; the December aggregate, summed across all years in the dataset, is the single largest figure and has not been isolated to a specific cause here.

Monthly Net GL Activity — 2023–2025, USD (by calendar month)

December aggregate net activity (~\$43K) is the most pronounced single-month figure in the dataset, aggregated across all years present in the General Ledger.

MANAGEMENT CONSIDERATION

Maintain quarterly forecast reviews to help sustain accuracy near current levels, and review the drivers behind the December GL aggregate before finalizing FY2026 plans.

MANAGEMENT PRIORITIES & CONCLUSION

Four Evidence-Based Priorities for FY2026 Planning

Priority	Management Consideration	Evidence	Horizon
Collect overdue customer receivables	Prioritize collection efforts on the oldest overdue balances.	92.7% of USD accounts receivable overdue (FY2024); \$334K over 90 days past due.	Near-term
Improve forecasting and budget discipline for Finance and IT	Review forecasting assumptions and continue monitoring departmental spending against budget.	Finance –1.4% and IT –1.8% budget variance, the two largest unfavorable results of six departments.	Next planning cycle
Maintain quarterly forecast reviews	Continue the recurring review cadence that has supported forecast reliability.	Forecast accuracy averaged 98.3% (range 96.6%–99.7%) across FY2024–FY2025.	Ongoing
Review notable General Ledger activity before FY2026 planning	Investigate the drivers of the December aggregate net outflow and determine whether it reflects recurring or isolated activity	December aggregate net GL activity of approximately (\$43K), the largest single-month figure in the dataset.	Before FY2026 planning

OVERALL CONCLUSION

NorthStar's simulated FY2024–FY2025 results tracked closely to plan overall, with Marketing outperforming and Finance/IT slightly behind. The clearest area requiring management attention is working capital, where a large share of receivables is significantly past due. These findings and recommendations are based solely on the datasets available in this simulated portfolio case.

Basis of Analysis & Methodology

This report is based on the datasets underlying the Project 3 Power BI analysis (General Ledger, Budget/Forecast, Accounts Receivable, Accounts Payable). Figures were validated against source data where noted below; some figures are sourced directly from the existing dashboard where independent re-derivation was not feasible from the available extracts.

SOURCE & REPORTING BASIS

Analytical Area	Period	Currency / Filter	Source	Validation
Financial Performance / Department Variance	FY2024–FY2025 (combined)	All departments, USD	Budget-Forecast source table	Independently reconciled — Actual, Budget, Forecast, and both variance measures tie to source data at the department level
Working Capital — Accounts Receivable	FY2024	USD only, due-date basis	Accounts Receivable source table	Independently reconciled
Working Capital — Accounts Payable	FY2024	USD only	Accounts Payable source table	Dashboard-sourced; not independently re-derived
Net AR/AP (Working Capital page)	FY2024	USD only	Derived from AR & AP dashboard KPIs	Arithmetically consistent; not independently reconciled
Financial Activity (General Ledger)	2023–2025 (full dataset)	USD only, aggregated by calendar month	General Ledger source table	Independently reconciled
Forecast Accuracy	FY2024–FY2025 (quarterly)	USD, average of 4 quarterly figures	Budget-Forecast source table	Independently reconciled

KNOWN LIMITATIONS

Data covers a simulated, portfolio-scale scenario and is not connected to a live production environment. Non-USD-denominated transactions are present in the underlying datasets but are excluded from the USD-based figures presented in this report. Accounts Payable and Net AR/AP figures are sourced from the existing dashboard rather than independently re-derived. Aging and working-capital figures reflect a single reporting snapshot (FY2024 year-end) rather than a continuously updated position.

NorthStar Manufacturing Group is fictional. This is a simulated portfolio case using historical sample data; no unsupported financial impact is claimed, and no recommendation should be read as having been implemented.
